PROFILE

I'm a Mechanical Engineer whose had a heavy focus on manufacturing looking to transition to a career as a full-stack developer. I hope to be able to leverage my problem solving abilities and technical background/experience to set myself apart from the rest of the up-and-coming developers.

PROJECTS

Park Pass

Denver

Apr 2022

Worked on team that created a website that can provide information related to any and every National Park in the U.S. requiring only the name of the National Park as input.

<https://gokubblue007.github.io/Park-Pass/>

Weather Lookup

Denver

Mar 2022

Developed a website that is meant to use third party API's to display the current and future weather conditions of a city chosen by the user.

https://ssiegelman15.github.io/Weather_Lookup-HW-WK6/

Work Day Scheduler

Denver

Mar 2022

Created a functional work day scheduler using third party APIs (jQuery, Bootstrap). The user can input tasks or appointments in the hours of the workday and their entries will be saved on local storage to ensure they are displayed even if the page is refreshed. The background color of the hour tells you if it is past, present or in the future.
